

DATE: _____

WIRELESS INSTALLATION PERMISSION FORM (Washington's Lottery Retailer POS Equipment)

Retailer# _____ Store Name _____

Address _____ City _____

Upon arrival at the store, the GTECH Field Service Technician will perform a site survey to determine which type of wireless communication will best be suited, (Remote Radio, Satellite, or Master Radio/Satellite communications). Once the preferred communication type is determined, we will install the necessary equipment.

The simple installation consists of mounting wireless equipment on or adjacent to your building. There will be no holes drilled into your roof at any time. A coaxial cable is then connected from the equipment, through the outside wall or through an existing point of penetration on the roof, to an indoor receiver unit mounted inside the building.

In order for GTECH to proceed with the installation of the wireless system we will need your (building owner) authorization. If you have any questions in regards to our wireless installation, please feel free to call our Helpline at 888-810-4357.

The building owner's authorization will allow GTECH Field Service Technicians access to the roof to install, replace and/or repair Radio or Satellite communications equipment. GTECH reserves the right to change the type of communication equipment installed without needing additional approval.
